

# Wind Turbine Blade Repair, Inspection, Cleaning & Upgrades

Performance Composites is committed to be a long-term reliable partner to help you:

- Improve or restore the performance of your turbine blades to maximize power production
- Prevent unscheduled turbine shutdowns due to blade problems or icing
- Prolong the life of the turbine blades and prevent costly major repairs
- Reduce O&M costs

We utilize the best equipment, process, and technologies that are cost effective and expeditious:

- We use state-of-the-art Asmus® Suspended Platforms which allows us to rapidly set up and effectively service your blades up-tower. No need to bring in a crane.
- We utilize pressure washers to rapidly deep clean the blades to remove contaminant build-up and restore blade performance.
- We conduct regularly scheduled up-tower blade inspection and repair to prevent minor damage from spreading, to restore blade performance, to ensure lightening protection is functioning and to prolong the life of the blades.
- We inspect blade interior & exterior prior to warranty expirations and help you manage and inspect work done by third parties.
- We apply Teflon paints on the blades to prevent contamination build up and reduce blade icing.
- We apply leading edge tape to protect and prolong the life of the blades.
- We perform cosmetic repairs, blade remediation, major structural repairs and lightening damage repairs.
